

STOIC
FOR PURE SOUND

stoic

ABSORBER BASES

FREE-STANDING

From the wall to the floor: with the STOIC base ideal sound is lifted up also from floors and furniture to enthusiastic levels.

Constructional and in its design the STOIC base is a derivative of the STOIC wall mount. Its mandate: to eliminate vibrations from the devices' support. No matter if HiFi components are to be placed on the floor or on furniture such as side-boards.

The metal framework of the STOIC base is made out of the same thick-walled steel tubing as the STOIC wall mount, the corners stiffened with triangle consoles. Hereupon, the hard unsprung coupling of the low-resonance support plate made out of natural slate or birch plywood is put into effect.

The STOIC base has a pay load of up to 100 kilogram. It is available in the standard sizes of 40 × 55 and 50 × 55 cm.

By its stability and rigidity, the STOIC base offers a solid place to very heavy power amps as well as sensitive components such as tube amps

and turntables. Vibrating energy of what source ever is eliminated by the enormous mass of the construction: the frame is sand filled; additionally we recommend to choose the optional sand-filled support plate if you have to deal with especially bumpy or light underground. So there is no chance left for resonances, motor vibrations, generator buzz or music energy flowing back via the floor.

On the design you have the choice of different materials and finishes – we want to fit the STOIC perfectly into your home. One thing staying the same with each STOIC is its elegant and floating style. At last, premium components require a high quality fundament.

THE METAL CONSTRUCTION

- Entirely hand-welded frame made of finely brushed V2A stainless steel or optionally powder-coated steel (matted black/ matted white).
- 3 mm thick square tube with dimensions 30 × 30 mm. Filled with sand.
- 2 standard surface areas available (WxD): 550 × 400 mm or 550 × 500 mm.
- For the wall mount, the panel for wall installation is made of 10 mm thick, V2A stainless steel/ powder coated steel.
- The STOIC base comes with four height-adjustable spikes and appropriate washers.
- All surfaces and welding seams visible in the assembled state are sanded and for the stainless steel version are finely brushed.
- The carrying capacity 100 kilogram, depending on the wall anchorage.

WALL MOUNT

CARRYING CAPACITY UP TO 100 KILOGRAM

The unshakeable wall mount was the first product of HighStandArt. The idea behind it: to avoid floors and furniture – instead taking advantage of the wall as a save and sound place for HiFi equipment. That's how it decouples Hi-Fi devices completely from vibrations and resonances.

The metal frame filled with sand, kills vibrations by its enormous mass, as well as the use of low-resonance materials such as natural slate or plywood. A hard, unsprung coupling between the frame and the support ensures that no swinging is produced.

And last but not least, STOIC showcases valuable devices in an equally valuable way. And this besides its enormous carrying capacity.

Turntables and amplifiers often are very heavy. No problem for the STOIC wall mount. With its robust construction and special fastening system,

consisting of five expansion sockets, it can carry up to 100 kilogram on concrete or solid brick walls. Hard to believe with such a light and floating design.

The STOIC wall mount is available in the standard sizes of 40 × 55 and 50 × 55 cm. Further, you have the choice of different materials and finishes. After all, you know best what fits into your home.

Installation is very easy – even for unpracticed craftsmen. A sturdy drilling template is included and a clear instructions manual guide you through the set-up process.

Weight (depending on size):

Metal construction incl. sand filling approx. 12.5 kg/14 kg

Wooden panel approx. 3 kg / 4 kg

Slate panel approx. 20 kg / 25 kg

SUPPORT PLATES

- 30 mm thick, polished natural slate plate. Sealed with Zapon lacquer. We only use slate of the best quality from Germany with excellent damping properties by a soft, least crystalline structure.
- 30 mm thick plywood. Birch veneer in best furniture quality. Colours: birch natural clear lacquer/birch black stained/white lacquer.
- 30 mm sand-filled plywood sandwich. Birch veneer in best furni-

ture quality. Colours: birch natural clear lacquer/birch black stained/white lacquer. No cable feedthroughs possible.

- The support plate is hard-coupled with height-adjustable spikes to the steel frame.
- Optionally, support plates come with two circular cable feedthroughs on the long side.
- The metal work and the support plates are completely handmade in Germany.
